Daily opposite step = first sampled close moving against the initial gap sign; first step is reaction open → close.
Later steps compare consecutive closes. This differs from the native five-day reversal flag and does not reveal intraday duration.

Current-vintage, post-hoc vendor-only exploration. Publisher eligibility and syndication remain unverified; primary means all null.
Percentages describe nominal raw price action, not trading returns, confidence, forecast accuracy or causal effects. No intraday calls.
